

Medical Scans

Billing

Restructured Process

Scans and results are electronically stored and securely published on the Internet

Physicians use a secure Internet connection to read and manage patient scans and results

The typist uses the same secure web application to record the doctor's comments

A typist completes the report for a patient

The bill is automatically created for an electronic or disk submission to the central billing facility and is accessible from the central clinic

A researcher uses the dynamic research tool to instantly generate reports, select candidates, and manage recurring templates. The researcher has access to current data from all clinics

Reports are hand typed from calculations

Research

Features

- Patient scheduling
- Health card validation
- Digitization of medical scans
- Web interface for better accessibility
- Automated billing process
- Dynamic research tools
- Office interconnectivity
- Detailed billing and patient reports
- Patient and Physician management
- Customizable to meet unique clinic needs

Benefits

- Paper trail eliminated
- Quick search capabilities drastically reduce research time
- Reduced research time results in increased studies
- Office interconnectivity makes patient management and accounting a breeze
- Scheduling for all clinics can be performed at a central location
- Web interface allows for remote reading and analysis of patient information and medical scans
